

1. View which apps in your settings are draining your battery, choose to turn on any apps that are causing a shortened battery life.
2. Turn your Bluetooth and Wi-Fi off when not in use through your settings, these continuously drain the battery looking for signals and connections.
3. Lower your screen brightness, some smartphones may have an auto feature which adjusts your brightness according to the amount of lighting around you. This will help conserve battery life.
4. Close applications that were previously opened. Apps will consume battery power in the background as long as they are open.
